EXPERIENCE

www.HostnDine.com
San Antonio, TX — 2015

HostnDine.com was the brainchild of one of my group members. We are three total and created the site to provide our end users with an unforgettable dining experience locally. It is the Airbnb of local dining but better. The site was constructed using Twitter Bootstrap within the Laravel framework, Javascript and various libraries for analytics and a better user experience.

Accomplishments

- Handled the back-end migrations to set our database structure
- Created custom code for our hosting application that returned a grade based on the user's input
- Implemented PHP to assist in grabbing user's input
- We utilized social media, email, GitHub and other communication channels to ensure an open channel between one another

www.moseJem.com
San Antonio — 2015

A site I managed and constructed to show my work. The animation and photos were partially done by me. I am currently working on an app that educates young individuals on the true cost of college with regards to his or her career choice.

Accomplishments
- Handled the server-side to connect my IP address to my server
- Source code can be found on GitHub/MoseyM/blog.dev
- API's were and/or will be used to grab information pertinent to my app's use
- Javascript and CSS were mainly used in the Whackamole game on the site

EDUCATION
